PROJECT PRESENTATION • WEB APPLICATION

ClassReady

Classroom Readiness Monitoring and Issue Reporting System

A centralized workspace to track classroom conditions, inspections, and facility issues.

FACILITIES OVERVIEW

48 Total classrooms

36 Ready for classes

12 Need attention

08 Open issues

Prepared by: Mark Jolo Lara • Course/Section: BSIT-3/Section 2

01 • INTRODUCTION

The problem we want to solve

Classroom condition information can be difficult to track when inspections and issue reports are kept separately.

Scattered information

Room readiness, inspection results, and repair requests may be spread across different records.

Slow follow-up

Without clear status and assignment, facility issues can be overlooked or delayed.

Limited visibility

Staff need a quick view of which rooms are ready and which require attention.

Goal: make classroom monitoring more organized, visible, and actionable.

02 • SOLUTION

What is ClassReady?

A web-based classroom operations system built with a React frontend and a Laravel REST API.

Monitor

- Keep classroom records
- Review readiness checks
- Identify rooms that need attention

Respond

- Submit facility issue reports
- Track priority and status
- Manage users and temporary admin access

Designed for administrators and teachers working together.

03 • MAIN MODULES

Core features

The interface is organized around the daily tasks involved in classroom operations.

Dashboard

Summary metrics and recent activity.

Classrooms

Room code, building, floor, and capacity.

Readiness checks

Record classroom condition and inspection status.

Issue reports

Track facility problems, priorities, and resolution.

User management

Manage teacher accounts and access permissions.

Temporary admin

Delegate selected administrative responsibilities.

04 • WORKFLOW

How it works

A simple workflow connects classroom inspection to issue follow-up.

1 Inspect

A staff member records the classroom condition.

→

2 Evaluate

The system marks the room ready or needing attention.

→

3 Report

A teacher submits a facility issue with details and priority.

→

4 Assign & track

Authorized users review, assign, and update issue status.

Outcome: a clearer record of classroom readiness and maintenance follow-up.

Technology stack

Frontend and backend are separated so the interface can communicate with a structured API.

Frontend

React
Vite
CSS

Backend

Laravel 12
REST API
Request validation

Data & security

MySQL / MariaDB
Laravel Sanctum tokens
Role-aware access

Development setup: run the Laravel API and React/Vite frontend in separate terminals.

06 • ACCESS & DATA

Roles and safeguards

The backend includes role-aware filtering and validation for key workflows.

Administrator

Oversees classrooms, users, readiness records, and reports within their organization.

Teacher

Can register with an admin invite code and submit classroom issue reports.

Temporary admin

Can be granted selected oversight duties without changing the main account role.

Validation and authenticated API routes help protect actions and keep records consistent.

07 • DEMO

Suggested live demonstration

Use this sequence to explain the project while showing the running website.

Walkthrough

1. Sign in as an administrator
2. Show dashboard summary
3. Open the classroom list
4. Review a readiness check
5. Demonstrate issue reporting and status tracking

What to point out

- Navigation between modules
- Status and priority indicators
- API-backed records and validation
- Role-based visibility
- Opportunities for future enhancement

Tip: replace the mockup on the cover with a screenshot of your actual running website.

08 • CONCLUSION

Benefits and next steps

ClassReady brings classroom readiness and facility issue tracking into one organized workspace.

Expected benefits

- Faster visibility into room conditions
- More organized inspection history
- Clearer issue follow-up

Future improvements

- Connect every frontend module to the API
- Add charts and exportable reports
- Add notifications and audit history
- Improve mobile responsiveness

Thank you! • Questions?

Replace placeholders and confirm which modules are fully implemented before presenting.
